

DECATHLON

Sales & Customer Analytics

Business Analytics Project Report

An Excel-based retail analytics project that converts 30,000 synthetic transactions into an executive dashboard covering sales, orders, customers, sports, product categories, retention, and customer contribution.

Tool	Microsoft Excel
Dataset	30,000 synthetic retail transactions
Analysis Period	2024–2026
Project Focus	Sales & Customer Analytics
Prepared For	Business Analytics Portfolio

Portfolio Project • Synthetic Data • Executive Reporting

1. Executive Summary

This project demonstrates a complete business analytics workflow using a synthetic Decathlon-style retail dataset. The analysis moves from transaction-level data to management-ready KPIs and visual storytelling. The dashboard is designed to help users understand revenue performance, order activity, customer scale, category contribution, retention, and channel behavior without requiring extensive manual analysis.

The dataset contains **30,000 transactions** and **8,998 unique customers**. Final sales amount to **■36.71 Cr**, with an average order value of **■12,235.82**. Recorded profit is **■11.27 Cr**, representing a margin of approximately **30.7%** on final sales.

The dashboard's core value is its ability to connect descriptive performance metrics with business questions: where revenue is coming from, how demand changes over time, which categories deserve attention, and how customer behavior can inform retention and growth decisions.

Headline KPIs

Total Sales	Total Orders	Customers	Average Order Value
■36.71 Cr	30,000	8,998	■12,235.82
Total Profit	Profit Margin	Retention Rate	Return Rate
■11.27 Cr	30.7%	64.6%	8.1%

2. Business Objectives

The analysis was structured around five practical business objectives:

01	Measure overall commercial performance	Track sales, orders, AOV, profit, and period-level movement.
02	Identify revenue drivers	Compare sports and product categories to find high-contribution areas.
03	Understand customer scale and retention	Assess unique customers, customer segments, and retention behavior.
04	Evaluate channel and demographic contribution	Compare website, store, mobile app, and gender-based sales.
05	Support management decisions	Present results through an interactive, executive-friendly dashboard.

3. Data Understanding

The workbook contains five sheets: **Sheet1**, **Data**, **Sports Image Table**, **Insights**, and **Dashboard**. The primary analytical table is the Data sheet, which contains 30,000 rows and 39 fields.

Data Domains

Customer	Customer ID, name, gender, age, age group, membership, customer segment
Product	Product ID, product name, product category, brand, sport type
Sales	Quantity, unit price, discount, sales amount, final amount, cost price, profit
Store	Store ID, store name, city, state
Channel & Payment	Sales channel, payment method, salesperson
Delivery	Delivery type and delivery days
Experience	Customer rating, return status, return reason
Marketing & Time	Promotion campaign, quarter, month, year

Data Quality & Preparation

The analysis uses the supplied workbook as the source of truth. Dates were interpreted as transaction dates, and the final transaction value was used as the primary sales measure for dashboard-level sales reporting. The workbook also contains pre-calculated Insight outputs that support the dashboard presentation.

Observed dataset-level checks include 30,000 transaction rows, 30,000 distinct orders, 8,998 distinct customers, and a complete 2024–2026 analysis window. The synthetic nature of the data should be considered when interpreting the results.

Important Modeling Note

The workbook is primarily an Excel analytics solution rather than a formal enterprise data warehouse. For a production implementation, the transaction table could be separated into fact and dimension tables, supported by a dedicated Date dimension and standardized business definitions for retention, sales, profit, and returns.

4. Sales Performance Analysis

Total final sales are **■36.71 Cr**. Annual performance shows a modest increase from 2024 to 2025, followed by a lower reported value in 2026. This pattern should be interpreted carefully because the dataset spans different levels of observed transaction activity across the three years.

Annual Sales Snapshot

Year	Sales	YoY Change
2024	■12.97 Cr	—
2025	■13.11 Cr	1.1%
2026	■10.63 Cr	-18.9%

Monthly Sales Trend

May is the strongest month in the dataset at approximately **■3.54 Cr**, while September is the weakest at approximately **■2.74 Cr**. The monthly pattern suggests that seasonal or campaign-level analysis could add value in a production environment.

5. Product & Sports Performance

Category and sport analysis is central to the dashboard because it shows where customer demand is concentrated. Cycling is the clear leading category in the supplied dataset.

Top Revenue Contributors

Rank	Category	Sales	Share
1	Cycling	■8.06 Cr	22.0%
2	Camping	■4.15 Cr	11.3%
3	Running	■3.51 Cr	9.6%
4	Fitness	■3.35 Cr	9.1%
5	Trekking	■3.30 Cr	9.0%

Top 5 Sports in the Dashboard

Rank	Sport	Sales	Orders
1	Cycling	■8.06 Cr	3,139
2	Outdoor	■4.15 Cr	3,020
3	Running	■3.51 Cr	3,151
4	Gym	■3.35 Cr	3,116
5	Hiking	■3.30 Cr	2,848

Business implication: Cycling contributes approximately 22.0% of total sales. This concentration suggests an opportunity to examine inventory availability, cross-selling, pricing, and campaign strategies around high-value sport ecosystems.

6. Customer Analytics

The customer base contains **8,998 unique customers**. The dashboard reports an overall retention rate of **64.6%**. Monthly retention varies across the year, indicating that customer engagement is not constant and may benefit from targeted lifecycle interventions.

Month	Retention
Jan	16.6%
Feb	16.2%
Mar	15.9%
Apr	17.3%
May	16.2%
Jun	14.9%
Jul	13.3%
Aug	14.3%
Sep	14.2%
Oct	14.6%
Nov	12.8%
Dec	14.7%

Customer Segment Contribution

Segment	Sales	Share
Returning	■16.46 Cr	44.8%
Loyal	■11.15 Cr	30.4%
New	■9.10 Cr	24.8%

Returning customers contribute the largest share of sales, followed by loyal and new customers. This supports a retention-led growth strategy in which the business protects repeat-purchase relationships while using acquisition campaigns to expand the new-customer pool.

Gender Contribution

Gender	Sales	Share
Male	■18.40 Cr	50.1%
Female	■18.31 Cr	49.9%

7. Channel & Operational Analysis

Sales are distributed relatively evenly across the three channels, which indicates a diversified customer journey rather than dependence on a single route to market.

Customer Experience & Returns

The average customer rating is approximately **3.00/5**, while the observed return rate is approximately **8.1%**. These measures should be monitored together: high returns or weak ratings can point to product, delivery, expectation, or service issues that may ultimately affect retention.

Financial Indicators

Recorded discounts total approximately **5.35 Cr**. Profit is approximately **11.27 Cr**, producing a final-sales margin of **30.7%**. In a production setting, management should monitor margin by category, promotion, channel, and customer segment rather than relying only on aggregate profit.

8. Business Insights & Recommendations

Protect the Cycling category — Cycling is the largest revenue contributor. Prioritize availability, product assortment, accessories, and cross-sell opportunities around cycling customers.

Strengthen retention programs — With an overall retention rate of 64.6%, use targeted lifecycle campaigns, loyalty benefits, and personalized offers to increase repeat purchases.

Investigate monthly seasonality — May is the strongest sales month while several later-year months are lower. Review promotions, inventory, campaigns, and customer traffic to understand the underlying drivers.

Balance channel investments — Website, store, and mobile app sales are relatively close. Maintain an omnichannel strategy and analyze channel-level AOV, retention, and profitability before shifting investment.

Manage discount-to-margin trade-offs — Discounting is material in absolute value. Evaluate promotion effectiveness using incremental revenue and profit rather than sales uplift alone.

Use category-level decisioning — Category and sport performance can inform assortment, inventory planning, merchandising, and campaign allocation.

9. Dashboard Design & User Experience

The dashboard follows an executive-first layout. KPI cards provide immediate performance context, while the middle section emphasizes the top sports and the lower section provides trend, category, retention, and demographic views. Blue visual accents align the interface with the Decathlon-inspired brand direction and create consistent visual hierarchy.

Feature	Purpose
Year selector	Switch between 2024, 2025, and 2026 performance views.
Month selector	Focus the analysis on a specific month.
KPI cards	Provide immediate visibility into sales, orders, customers, and AOV.
Top 5 sports cards	Highlight high-performing sport areas with sales and order metrics.
Sales trend	Show monthly movement and seasonality.
Category donut	Show category contribution to sales.
Retention chart	Track monthly customer retention.
Gender chart	Compare sales contribution by gender.

10. Conclusion

The Decathlon Sales & Customer Analytics project demonstrates how a large transaction table can be converted into a practical management dashboard using Microsoft Excel. The solution combines KPI development, trend analysis, category analysis, customer analytics, and visual storytelling into a single decision-support experience.

The strongest portfolio value of the project is not only the dashboard itself, but the analytical thinking behind it: defining useful business questions, selecting meaningful metrics, organizing the information hierarchy, and translating patterns into actionable recommendations.

11. Technical Summary

Technology	Microsoft Excel
Primary Dataset	Data sheet — 30,000 rows × 39 fields
Analysis Sheets	Insights and Dashboard
Supporting Sheet	Sports Image Table
Core Measure	Final_Amount
Profit Measure	Profit
Time Fields	Order_Date, Quarter, Month, Year
Customer Key	Customer_ID
Order Key	Order_ID
Primary Outputs	KPIs, trends, category contribution, retention, gender contribution

Data Disclaimer

This report uses synthetic data for portfolio and educational purposes. It does not represent official Decathlon customer, sales, financial, or operational information. Metrics and conclusions should therefore be treated as a demonstration of analytical technique rather than real company performance.
